windream donation vote 2018

Donations Instead of Christmas Cards

Donating with your vote

Who does not know them – pretty, colorful Christmas cards. But usually, the joy does not last very long. Therefore, we have decided to not send any written Christmas wishes and to invest the money saved in a sustainable charity project.

We will donate 5.000 € and you can vote for a charity organization to which our donation shall go.

We have preselected three charities. We will support the organization which receives the most votes!

INDEX

- windream Donation Vote 1
- windream at the BAU 2019 3
- CEBIT 2019 Canceled 5
- windream Training Schedule 2019 6
- windream Imaging 6.5 7
- New Version of the windream Sidebar 8
- windream Trainings 9
- windream Events 11
- Imprint 11

Your vote matters!

You can choose between the Deutsche Kinderkrebsstiftung (German Childhood Cancer Foundation), Ärzte ohne Grenzen e. V. (Médecins sans Frontières) and the Deutsche Welthungerhilfe e. V. (German World Hunger Help).

To the windream donation vote

For further information on the vote, on the conditions for participation and on the individual organizations, please refer to our website.

windream Donation Vote

The donation vote takes place from now on until December 31, 2018. Your vote will be accepted until the last day at 23:59. The winner, meaning the organization with the most votes, will be announced on our homepage and of course in the first newsletter of the new year.

We are looking forward to your participation in our donation vote.

Premiere

windream at the BAU 2019

Next year, for the first time, our ECM products will be presented at the BAU (the world's leading trade fair for architecture, materials and systems) in Munich. The "BAU 2019" will take place from January 14 to January 19 on the exhibition grounds in Munich. We will be present with our stand in hall C5. Our stand number is 229. We would like to invite all interested parties to visit us at our stand in Munich!

Digital processes are getting more and more important in everyday work, also in the construction industry. Of course, to follow this trend, we will present our products adequately in Munich.

What are we presenting?

In addition to the latest version of our windream ECM system of course, the focus will be on products which are relevant for the construction industry. That primarily means a detailed presentation of our file management solutions. And even though the application of an ECM system is not limited to certain industries, it can be used just as efficiently in certain industry sectors as any industry-specific application. Therefore, the focus of our product exhibition in Munich will be on presenting specific opportunities and on how the solutions for file management can be used reasonably – key word: "construction file".

The BAU as a leading trade fair – a platform for DMS and ECM

We are convinced that industry-specific trade fairs and their visitors will be more interested in IT products in future; and so digitization in the construction sector progresses rapidly. For this reason we think that the BAU 2019 is a suitable platform for presenting our software solutions, especially as it defines itself as the leading trade fair for architecture, building materials, and systems. Every two years, practical innovations, cross-industrial solutions for the commercial and public sector and interior construction are presented in Munich.

The trade fair is also of great interest for our partners. Therefore, we are happy to announce that the following windream partners will be joining us at the BAU 2019 and will be presenting their products all around windream: BCT Germany, One Click Solutions, ZMI, visuplus and Network Dimensions.

Free tickets for interested parties

Interested parties who wish to visit us in Munich can get free tickets via our homepage.

BAU 2019: Ticket form

For further information on our participation in the BAU 2019 and on the BAU 2019, please refer to our website www.windream.com/bau and to the official BAU 2019 website www.bau-muenchen.com.

CEBIT 2019 Cancelled

Due to recent events, we must inform you that the CeBIT 2019 has been cancelled, as the organizer Deutsche Messe AG officially notified us on November 28.

CEBIT[®]

As you may have already heard, the cancellation also means the end of the current exhibition format. As an IT distributor and long-time exhibitor, we regret this decision, especially as the new event concept of practically experiencing digitization, which was announced only this year, sounded very promising and future-oriented.

windream with new event concept

But we would also like to use the opportunity arising from the CEBIT cancellation to point out a completely new event concept "made by windream", which we would like to present in the beginning of 2019 and about which we will of course inform you comprehensively and in due time.

What should you expect? We are planning further windream events in Germany, a new edition of our big windream conference windream.CON, more partner events and participation in further trade fair formats with the opportunity to participate for our partners. First steps towards this goal have already been made: for example, our first participation in the BAU 2019 in January in Munich (see above).

Therefore: Stay with us in the new year and stay tuned!

The windream Training Schedule 2019 is set

Training dates are now available online

The new windream training program for the year 2019 is set and all training dates can now be checked online in the info center on our homepage.

Under the following link, under "Aktuelle Schulungstermine", an overview of all training dates for the whole year 2019 in German language can be found: www.windream.com/schulung.

If you should be interested in training sessions held in English language, please contact us.

Information documents for download

Furthermore, we provide a download link for downloading the current windream training program in German language. In this document, you will find an introduction to all training modules and organizational notes on how to participate in a training module.

[windream training program 2019](#)

Additionally, under the following link, all dates for the three training blocks for the upcoming year can be downloaded via the web portal:

windream Imaging

New Version 6.5 will be released shortly

Our scan and imaging solution windream Imaging will be released shortly!
One of the most important changes: The usability of the application has been improved significantly.

Improved usability: Redesign of the interface, new icons and styles

A complete redesign further improves the application, from which the users will directly benefit. For example, items and functions which are executed directly via the work interface get new icons which results in a new design. The setup has also been redesigned.

Furthermore, pages of a document which have been edited recently can be displayed directly now. Additionally, current work states can be saved periodically and be reloaded at the next start. Furthermore, a quick start view now allows the user direct access to the functions Scan and Import and to further items.

Technical innovations

When it comes to technical matters, many changes have been made as well. windream Imaging has been completely adjusted to 64 bit and uses the new Abbyy FineReader engine version 11. The scan interface of windream Imaging has been outsourced into a separate process and a new process for recognizing empty pages has been implemented.

Further new features complete the range of functions. This includes, among other things, key combinations in the Scan Client, new options and a logging function for the administration tool. Many further functions complete the range of functions.

Available soon

The new version 6.5 of windream Imaging will not have been released yet when this newsletter is published. However, it will be released soon.

New Version of the windream Sidebar

A new version of our windream Sidebar is available for customers and partners! The new version features many detailed improvements and optimizations.

The most significant feature is the option of providing the modified configurations of the Sidebar server-sided or centrally by an administrator. In this context, it is, for example, possible to roll out a customized version of the Sidebar to certain company sections. That means that the Sidebar can look differently in the different departments of a company.

This way, all employees of a certain company department receive exactly those functions in the Sidebar which are required for everyday work. Generally, the different configuration options of the sidebar are central but still configurable individually for the different company departments.

windream Trainings

Specific windream training sessions in English language will be held on request. For further information, please contact our partner management via partner@windream.com.
